

AMENDMENTS TO THE CLAIMS:

Listing of the Claims

1. (Currently amended) A cable system for use with an overhead door comprising:

a header bracket;

a floor assembly;

at least one cable having a first end attached to the header bracket and a second end attached to the floor assembly, wherein the cable is held in tension between the header bracket and floor assembly and a plurality of hinges including a first pin and a second pin wherein the first pin and second pin are offset and where the at least one cable passes between the first pin and the second.

2. (Original) A cable system of claim 1 wherein a floor assembly includes a floor bracket including a hook and a floor plate wherein the hook is engageable with the floor plate.

3. (Original) A cable systems of claim 2 wherein the floor plate includes an aperature that engages the hook.

4. (Original) The cable system of claim 3 wherein the floor plate is flush with a floor and wherein the floor includes a hole essentially complementary to the floor plate aperture.

5. (Original) The cable system of claim 3 wherein the floor plate includes at least one spacer.

6. (Original) A cable systems of claim 1 including a plurality of cables, each cable having a first end attached to the header bracket and a second end attached to the floor assembly

7-10. (Cancelled)

11. (Currently amended) The cable system of claim 1 wherein the at least one cable is selected from a continuous length of cable or a non-continuous length of cable, ~~and combinations thereof.~~

12. (Currently amended) The cable system of claim 1 wherein the at least one cable is a non-continuous length of cable.

13. (Original) The cable system of claim 1 including a header bracket having a hook.

14. (Currently amended) The cable system of claim 13 wherein the header bracket hook is complementary to a hook on ~~the~~ a locking bracket.

15. (Original) The cable system of claim 2 wherein the hook includes a foot that fits into the floor plate aperture.

16. (Currently amended) A cable system of claim 1 comprising

a header bracket;

a floor assembly including a floor bracket having a hook and a floor plate

including an aperture wherein the hook is engageable with the floor plate aperture;

at least one intermediate cable support selected from a hinge including a first pin and a second pin wherein the first pin and second pin are offset and where the at least one cable passes between the first pin and the second pin, and vertical standoff bracket including two offset pins where the at least one cable passes between the offset pins ~~a strut including an aperture wherein the at least one cable passes through the strut aperture and combinations thereof;~~

at least one cable having a first end attached to the header bracket and a second end attached to the floor assembly, wherein the cable is held in tension between the header bracket and floor assembly.

17. The cable system of claim 16 wherein the floor plate is flush with a floor and wherein the floor includes a hole essentially complementary to the floor plate aperture.

18. The cable system of claim 16 wherein the floor plate includes at least one spacer.

19. (Currently amended) The cable system of claim 16 wherein the at least one cable is selected from a continuous length of cable or a non-continuous length of cable, ~~and combinations thereof.~~

20. (Currently amended) The cable system of claim 19 wherein the at least one cable is a non-continuous length of cable.

21. (Currently amended) The cable system of claim 16 including a locking bracket.

22. (Currently amended) The cable system of claim 21 wherein the header bracket includes a latch that is complementary to a latch of the locking bracket.

22. (Currently amended) An overhead door comprising at least one cable system of claim 1 wherein the overhead door includes a plurality of horizontal panels including a top panel, a bottom panel and at least one intermediate panel, wherein the each of the plurality of hinges unite adjacent horizontal panels ~~cable support associated with at least one panel,~~ and wherein the header bracket is attached to the top panel and the floor assembly includes a floor bracket attached to the bottom panel.

23. (Original) The overhead door of claim 22 including a header having a header bracket with a hook.

24. (Original) The overhead door of 22 wherein the header bracket hook is complementary to a hook on the locking bracket.

25. (Original) The overhead door of claim 22 including two or more cable systems.

26. (Original) An overhead door comprising at least one cable system of claim 16 wherein the overhead door includes a plurality of horizontal panels including a top panel, a bottom panel and at least one intermediate cable support associated with at least one panel, wherein the header bracket is attached to the top panel and the floor assembly includes a floor

bracket attached to the bottom panel.

27. (Original) The overhead door of claim 26 including a header having a header bracket with a hook.

28. (Currently amended) The overhead door of 26 wherein the header bracket hook is complementary to a hook on ~~the~~ a locking bracket.

29. (Original) The overhead door of claim 26 including two or more cable systems.

30. (Cancelled)

31. (New) An overhead door including a plurality of horizontal panels including a top horizontal panel, a bottom horizontal panel and at least one intermediate horizontal panel;

a plurality of hinges each hinge including a first pin and a second pin wherein the first pin and second pin are offset and each hinge uniting adjacent horizontal panels; and

a plurality of cable systems, each cable system including a header bracket, a floor assembly, at least one cable having a first end attached to the header bracket and a second end attached to the floor assembly wherein the cable is held in tension between the header bracket and floor assembly and where the at least one cable passes between the first pin and the second of each of the plurality of hinges of the cable system wherein a cable system is installed at a center hinge location and at an intermediate hinge location of the overhead door.
